

AMENDMENTS

In the claims:

Please add the following claims.

41. (New) A method for providing media information to a user via an interactive media services client device coupled to a programmable media services server device, said method comprising:
- receiving user input identifying a media title; and
deleting said media title from a media title list.
42. (New) The method of claim 41, wherein said client device is a television set-top box.
43. (New) The method of claim 41, wherein said user input corresponds to the activation of only one button on a remote control device.
44. (New) The method of claim 41, further comprising the step of prompting said user to provide input as to whether deletion of said media title is to be permanent.
45. (New) A method for providing media information to a user via an interactive media services client device coupled to a programmable media services server device, said method comprising:
- receiving user input identifying a filtering criterion;
excluding a media title that meets said filtering criterion from a media title list.
46. (New) The method of claim 45, wherein said client device is a television set-top box.
47. (New) The method of claim 45, wherein data corresponding to said filtering criterion is stored in non-volatile memory.

48. (New) The method of claim 45, wherein said filtering criterion is whether said user had previously been provided with a media presentation corresponding to said media title.
49. (New) The method of claim 45, wherein said filtering criterion is a text string entered by said user.
50. (New) The method of claim 49, further comprising comparing said text string to other text strings; and providing said user with alternative text string selections.
51. (New) The method of claim 50, further comprising prompting said user to select a filtering criterion that corresponds to said text string.
52. (New) The method of claim 50, further comprising prompting said user to select an alternative text string.
53. (New) The method of claim 45, further comprising:
receiving user input identifying a second filtering criterion; and
excluding a media title that does not meet said second filtering criterion from said media title list.
54. (New) The method of claim 45, wherein a video presentation identified by said media title is currently available to said user via said client device.
55. (New) The method of claim 45, wherein a video presentation identified by said media title is not currently available to said user via said client device.

55. (New) A media services system for providing media information to a user via an interactive media services client device coupled to a programmable media services server device, said system comprising:
- memory; and
 - logic stored in said memory, said logic configured to cause a media title identified by user input to be removed from a media title list.
56. (New) The system of claim 55, wherein said user input corresponds to the activation of one button on a remote control device.
57. (New) The system of claim 55, further comprising logic configured to cause said client device to prompt said user to provide input as to whether deletion of said media title is to be temporary or permanent.
58. (New) A media services system for providing media information to a user via an interactive media services client device coupled to a programmable media services server device, said system comprising:
- memory; and
 - logic stored in said memory, said logic configured to cause a media title corresponding to a filtering criterion identified by user input to be excluded from a media title list.
59. (New) The system of claim 58, wherein each of a plurality of users provides user input identifying a filtering criterion.
60. (New) The system of claim 59, wherein a plurality of filtering criteria corresponding to a plurality of users are stored in memory.
61. (New) The system of claim 60, wherein each of said plurality of users is presented with a media title list.

62. (New) The system of claim 58, wherein said filtering criterion is based on whether said user had previously been provided with a media presentation corresponding to said media title.
63. (New) The system of claim 58, wherein said user input is a text string.
64. (New) The system of claim 63, further comprising logic configured to cause said client device to prompt said user to select a filtering criterion that corresponds to said text string.
65. (New) The system of claim 63, further comprising logic configured to cause said client device to prompt said user to select an alternative text string.
66. (New) The system of claim 58, further comprising logic configured to cause a media title that does not meet a second filtering criterion identified by user input to be excluded from said media title list.
67. (New) The system of claim 58, wherein a video presentation identified by said media title is currently available to said user via said client device.
68. (New) The system of claim 58, wherein a video presentation identified by said media title is not currently available to said user via said client device.
